

# A Single Source Solution Provider for All Your Security Needs

Comprehensive security posture means more than having a firewall in place and video cameras on the doors. The heartbeat of your business is your customer and proprietary data, but every day we see front page headlines for data breaches of companies who haven't taken the necessary steps to mitigate and secure both customers along with their own valuable data. Even for Fortune 500 enterprises this rings true, but small businesses are attacked at the same rate as Enterprises, and often the damages are so devastating that they never recover, both in terms of financial losses and reputation. When the investment is made into securing your business, it pays off multitudes for those responsible for securing that valuable data.

We recognize that security is also more than technology... it is about the people who manage the technology and processes the business has created to respond to potential threats, vulnerabilities, and impacts, in addition to user training and education.

Cybercrime damages are estimated to globally cost \$6 trillion annually by 2021, and ransomware damage costs are predicted to be 57x higher in 2021, reaching \$20 billion, compared to 2015

IT Company partners with industry leaders to implement secure protection for everything from your data and brand to your property and network.

- Endpoint & Device Security Management
- Virtual CISO
- Disaster Recovery and Backups
- Data Loss Prevention (DLP)
- Incident Response
- Behavioral Management / Staff Training & Awareness
- Professional Services Security Consulting

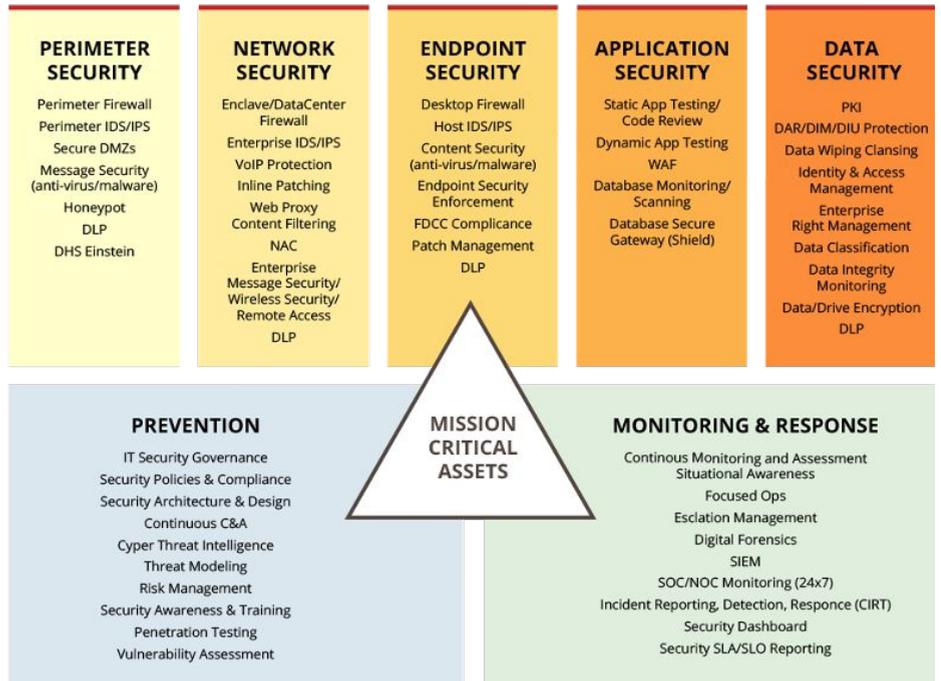

## LAYERS OF SECURITY

Cyber security and physical security is not just about technology. While technology plays a substantial role, alone it is not enough to protect you from modern vector attacks.

IT Company follows the ISO 27001 standard that recommends every comprehensive security solution address all areas of information security risk including people, process & technology.

By following this standard, we are confident we can help secure your mission critical assets, and bring the solutions required to protect, monitor, and respond to attacks from all vectors – preserving more than just your data and your network, but also your brand and reputation.

### OUTSIDE THREAT PROTECTION

### PEOPLE

Staff Training & Awareness  
Professional Skills & Qualifications  
Competent Resources

+

### PROCESS

Management Systems  
Governance Frameworks  
Best Practices  
IT Audit

+

### TECHNOLOGY

You can't deploy technology without competent people, support processes or an overall plan.
